Dear Dr. Rubio

Subject: Report and Gratitude for the Donation of the Ultrasound Machine to St. Padre Pio Hospital, Mambanda Branch

We are highly elated to present to you the report of the procurement of the Colour Doppler Ultrasound Machine at St. Padre Pio Hospital, Mambanda, donated by SurgForAll.

Evolution of the Purchase

Our appeal for an appropriate echography machine dates back to the first half of 2023. You suggested that we find the machine in the local market, a good idea! We presented to you proforma invoices from three local suppliers with a price range for recommended specifications. However, when you made your choice and sent the funding, the users, due to some recent experiences contested the fact that the machine was portable, very concerned and arguing that it was more expose to theft. That is why we ordered for an echography machine a little more expensive than the donation sent by SFA in February.

You transferred 9150 Euro (6 million FCFA) for the Dawei ecography on September 24 thereabout. The bank had some requirements for releasing the money, and we are grateful for your cooperation in providing some documentation. When we selected the contractor, (KarlP Sarl) it took our financial office quite a while to transfer the money because in our policy, we have particular times of the months when we effect transfers.

Procurement

When we placed the purchase order, KarlP Sarl indicated that the colour doppler echography DAWEI, was out of stock and had to be manufactured and shipped from overseas. The process has taken three months to be successfully completed.

Specifications of the Portable Color Doppler Echography Machine Dawei

Monitor size: 17 inch LED display

Windows operation platform (Win7)

Three probe connectors Rich c/inica/ measurement software

Support 0B report print

DopplerMode: Doppler Velocity
